

FOR IMMEDIATE RELEASE

August 1, 2007

RigMaster Power Corp. and DCL International Inc. are pleased to announce the introduction of RigMaster's 2008 model APU complete with Tier 4a compliant engine and diesel particulate filter (DPF) at this year's Great American Trucking Show.

The RigMaster APU, which is already an industry recognized emissions reduction device; providing climate control and electrical power while allowing the driver to shut down the main engine; will now be even more environmentally friendly. The diesel particulate filter was designed by DCL specifically for RigMaster to lower diesel particulate matter by 90%.

Submission for certification was presented to the California Air Resources Board last month and product will be available in time to meet 2008 requirements.

Stop by Booth 21135 to see the product first hand, learn more about this new APU technology and see what else is in store for 2008. Staff from both RigMaster and DCL International will be available to answer questions.

DCL International Inc. is a global leader in emissions control solutions for off-highway vehicles, stationary engines, industrial processes and specialized on-highway vehicles. DCL supplies to world leading engine manufacturers, original equipment manufacturers, and aftermarket retrofit. For more information about DCL, visit www.dcl-inc.com.

RigMaster Power Corp. manufactures and distributes the RigMaster Power APU in North America through a network of over 190 independent sales and service locations. For more information, log on to www.rigmasterpower.com.
