

FOR IMMEDIATE RELEASE

April 3, 2006

RigMaster Power Corp. is pleased to announce that production has commenced at their new facility in Olathe, KS. Operating under the name RigMaster Power Inc., the second facility opened April 1st and will operate in addition to the Toronto manufacturing facility; dramatically increasing the amount of RigMaster® Power APU's produced each year.

Plans for the US facility began late last year and have been progressing steadily. "The demand for a quality stand-alone APU like the RigMaster is huge and the opening of this facility has been our number one priority for some time". Says Gary Lisson, General Manager for RigMaster Power Corp., who then goes on to explain. "The decision to open a U.S. facility was easy-many of our customers are U.S.-based and we are pleased to offer them a U.S.-built product".

This new facility will be producing the standard RigMaster unit powered by the reliable Perkins 14HP diesel engine as well as building all units ordered with the Caterpillar engine option. Rigmaster's North American parts distribution will also be housed out of this facility.

Lisson is encouraged by RigMaster's growth and its position in the expanding market "The OEM's have introduced several versions of anti-idling devices, but none as fully-featured as our unit. We've been around a long time; we know the industry and we know our customers." Lisson expands, "Most importantly our customers know us. The RigMaster® Power product is well known in the industry as a high quality APU. Even in this highly competitive market, the demand for RigMaster Power APU's continues to grow. The market is on the rise and with the US facility open for business we are poised to meet the demands."

RigMaster Power Corp. manufactures and distributes the RigMaster Power APU in North America through a network of 150 independent sales and service locations. For more information, log on to www.rigmasterpower.com.
