

FOR IMMEDIATE RELEASE

January 15, 2006

Rigmaster Power Corp. announces the opening of a second manufacturing facility to build its popular RigMaster® Power APU. Operating under the name RigMaster Power Inc. the second facility located in Olathe, KS will operate in addition to the current manufacturing facility; dramatically increasing the amount of RigMaster® Power APU's produced each year.

"This is great news for our customers and for RigMaster", says General Manager, Gary Lisson, "Sales have exploded over the past year and lead times have stretched out. While I agree with the old adage that a good thing is worth waiting for, I am glad to say that with the additional facility in place, our customers won't have to wait to start saving fuel, saving money and saving the environment."

Lisson continues, "Over the past year we've done everything possible to increase production at our current location, including the addition of another shift. The only option we had left was expansion. And since so much of our customer base is in the US it makes sense that we build our product there".

RigMaster will continue to operate its sales and administration out of its Corporate Office in Toronto, Canada, as well as maintaining the same level of production already generated from the current facility.

The Olathe location is set to begin production in early March and will also house the RigMaster Parts Distribution for North America. This will make it easier for RigMaster's rapidly expanding dealer and customer base to obtain parts and service.

"With headline issues like the higher fuel prices and the 2005 Energy Act's provisions for increasing acceptance of APU's as a means to reducing our reliance on non-renewable energy sources; our customers are becoming more aware of the options available to them to save fuel and save the environment." remarks Lisson, "The RigMaster® Power product is well known in the industry as a high quality APU. Even in this highly competitive market, the demand for RigMaster Power APU's continues to grow. The market is on the rise and we are poised to meet the demands."

Lisson goes on to explain how RigMaster has continued to stay on top of the industry, "Our company and our product must continue to adjust to the changing market. RigMaster Power Corp. is a customer-focused company. Every change we have made and will make focuses on making it easier for our customers to do business while enjoying the many benefits that the RigMaster® Power APU has to offer. Expanding our operations and growing our network of dealers tells our customers that RigMaster® Power is here to support them".
