### **RigMaster Power Unveils 2004 Unit At MATS**

RigMaster Power, the leading APU manufacturer in North America and one of the founding members of the Idle Elimination Manufacturers Association (IEMA) unveiled the 2004 RigMaster Power APU at the Mid-America Truck Show in Louisville, KY on March 25, 2004.

The RigMaster Power unit provides 20,000 BTU's of air conditioning, 12,000 BTU's of heat, 4,000 Watts of 110-Volt power for electrical appliances & the block heater, a DC alternator to charge the truck's batteries and is fully independent from the truck's coolant and freon systems.

RigMaster Power continues to be powered by a Perkins 100 Series, water cooled, 2 cylinder engine; the most reliable and fuel efficient engines in its class netting even greater fuel savings.

The 2004 RigMaster now has a more efficient Sanden air conditioning compressor, thus ensuring headache free operation in extreme heat. RigMaster's alternator has been increased from 25 Amps to 40 Amps. Best of all, the 2004 RigMaster has an optional Autostart feature.

The feature allows the user to program the unit to start at any time up to seven days in advance. Autostart also allows the user to program the unit to be thermostatically controlled based on interior temperature and Autostart ensures that the truck's batteries never die by constantly monitoring battery voltage. This means that when a 12 Volt refrigerator is accidentally left on for the weekend, RigMaster Autostart will keep those batteries charged to eliminate a jump start on Monday mornings!

RigMaster Power eliminates the need to idle the truck, saving thousands of gallons of fuel. It saves needless wear and tear on your engine each year!

For more information on RigMaster Power, call 1-800-249-6222 or visit [www.rigmasterpower.com](http://www.rigmasterpower.com). O.O.I.D.A. and L.C.A.P.P. members don't forget to ask about RigMaster Power's rebate program.
