

Combat high fuel prices and stricter anti-idling laws with the RigMaster® Power APU.

Today's demands on the transport industry are taking a tough toll on your bottom line.

RigMaster® runs all night on what your idling truck burns in two hours saving enough fuel to pay for itself in 1 year.

The completely independent system is simple to install, does not affect your truck's OEM warranty and will never cause a missed/late delivery or risk taking your truck out of service.

Save Money With RigMaster®

- Burns 80% less fuel than an idling truck
- Extend service intervals on your truck
- Prevents unnecessary wear on vital engine components
- Avoid costly anti-idling fines
- Installation is fast and affordable
- Eliminate expensive roadside repairs due to alternator failures or the need for "jumpstarts"
- Increase the resale value of your truck

RigMaster® is backed by the most experienced, nationwide dealer network in the industry.

RigMaster Warranty: 2 YEAR 4,000 hours

Specs

Engine	2 cylinder, 8.7kw/11.5bhp, liquid cooled, diesel engine 2800 rpm
Fuel Consumption	0.3 gallon/hour
Generator	6kw 40 Amperes AC 120v
Alternator	60 Amperes DC 12v
Receptacles	(2) 120v
Weight	431 lbs

Main Unit

Width	26 1/2"
Height	29 "
Depth	30" Overall 22" off Rail

Bunk Heater/AC Unit

Width	14"
Height	91/4"
Depth	91/4"
Heat	13,500 BTU
AC	20,000BTU
278 cfm

T4

Why businesses large and small choose RigMaster®

Fastest Install Time

With RigMaster's® non-integrated, three component design, installation times are the fastest in the industry. The mounting system offers maximum flexibility to accommodate all current Class 8 truck frames, and can be located on either side of the truck and behind fairings.

Year-Round Power

RigMaster's® automotive-style heat and A/C systems do not consume ANY of the 6,000W of hotel load power available to the driver, while other APU's climate control systems consume 75%-100% of the available 120v power. The 6,000W power comes from a belt-driven generator, not an inverter, which can be harmful to both batteries and alternators.

Easy Maintenance

The RigMaster® is designed for easy servicing, utilizing components designed for the Heavy Duty Truck.

- Match service intervals with truck PM's
- Cover lifts off for easy access to all components
- 1000 hour oil change interval
- Consumable parts commercially available
- In-cab electrical outlet contains GFI Breaker for simple power reset.
- Filters/belts widely available
- Now Self-tensioning Serpentine belt replaces generator and compressor belt

RigMaster® offers you more choice for your power.

Product Options

T2

RigMaster's original unit offers superior automatic climate control, electrical power for appliances and battery charging capabilities utilizing industry proven technologies and our popular stand-alone design.

Now with improved servicing features and more efficient cooling for protection from the heat.

Available with either Perkins or Caterpillar Tier 2 EPA compliant engine.

T4

RigMaster's newest model gives you the flexibility for "4 corners" North American compliance while allowing you to enjoy the all the benefits of the RigMaster® APU. With improved heating and cooling capacity so drivers can stay comfortable in any weather.

- Can be equipped with optional DPF for compliance in California
- Available with either Perkins or Caterpillar Tier 4a EPA compliant engine

Optional Diesel Particulate Filter

Make your APU even more environmentally friendly by installing a DPF on your RigMaster® APU. Lowers Diesel Particulate matter by 90%. DPF can be installed on any T4 units for California compliance.
