

**FOR IMMEDIATE RELEASE**

**February 20, 2008**

---

RigMaster Power Corp. is pleased to announce an expanded product offering for 2008 as well as a number of product enhancements on all APU models.

RigMaster has expanded their APU Product offerings to include two distinct APU models. The T4 CARB compliant model utilizes a Tier 4a engine and can be equipped with a DPF for California compliance on 2007 or newer trucks pending final approval.

The T2 model is fitted with a Tier 2 EPA compliant engine, and is a cost-effective choice for customers looking to install an APU on Pre-2007 model trucks or who do not intend to travel to California. Both unit models boast a number of product enhancements for 2008

All 2008 models now come with a serpentine belt drive to replace the generator and compressor belts and will reduce maintenance, improve serviceability and increase the longevity of the APU. The new design also offers drivers improved heating and cooling to the cab and comes factory-installed with a quieter muffler designed with multiple exhaust options for greater installation flexibility.

Both unit models are available with either a Perkins or a Caterpillar engine option.

“With 4 models to choose from, our customers now have a single source with a broad selection of APU options to meet their idle reduction needs”, says Gary Lisson, General Manager for RigMaster Power, “Regardless of which model they choose, they have the peace of mind in knowing that their APU is backed by the RigMaster name and our high level of commitment to meeting the needs of today’s industry.”

RigMaster Power Corp. manufactures and distributes the stand-alone RigMaster Power APU in North America through a network of 200 independent sales and service locations. For more information, log on to [www.rigmasterpower.com](http://www.rigmasterpower.com).
